

COMPANY PROFILE

www.wolmecgroup.com

Wolmec is a young and dynamic company specialized in customized bulk material handling solutions.

Our production systems are a complex of machines, structures and equipment that allow the transformation of raw materials or derivatives into finished products.

Know-how that

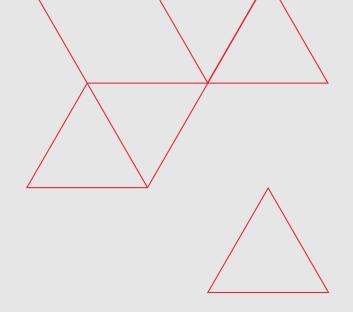

Our tradition dates back to the early nineties. Using Wolmec trademark we intend to launch again our innovative spirit while maintaining the scrupulous quality that has always distinguished our project executions.

comes from afar

Our character

Is defined by a proactive, future-oriented approach.

A wide range of technologies is the principal constituent of our solutions. With the help of virtual reality tools we predetermine the processes and can early detect critical issue in the design phase.

Even before execution, the customer will virtually enjoy the experience of seeing its future plant and observing details.

Which commercial sectors do we address:

CHEMICAL INDUSTRY

PLASTICS INDUSTRY

FOOD INDUSTRY

BUILDING INDUSTRY

WASTE
TREATMENT
INDUSTRY

Production phases

01

ANALYSIS, COMPARISON AND IN-DEPTH ANALYSIS

Of production requirements, potential critical issues and the cost analysis meeting the customers' demands.

02

PROPOSAL

In a week time we set a layout on paper as first step project on paper to be submitted to the customer, along with a virtual rendering of the system. It includes suggested technological solutions, components and materials as well as its related cost.

PRODUCTION

05

Following a further customer' screening approval, we proceed with production of all components of the system.

INSTALLATION

06

We supervise and execute all assembly and installation phases of the system, following criteria of absolute efficiency.

REVISIONS

We improve the proposal with any further specifications provided by customer and frame the spending budget.

04 DESIGN

On customer's approval, we start designing the system taking extreme care about minute details.

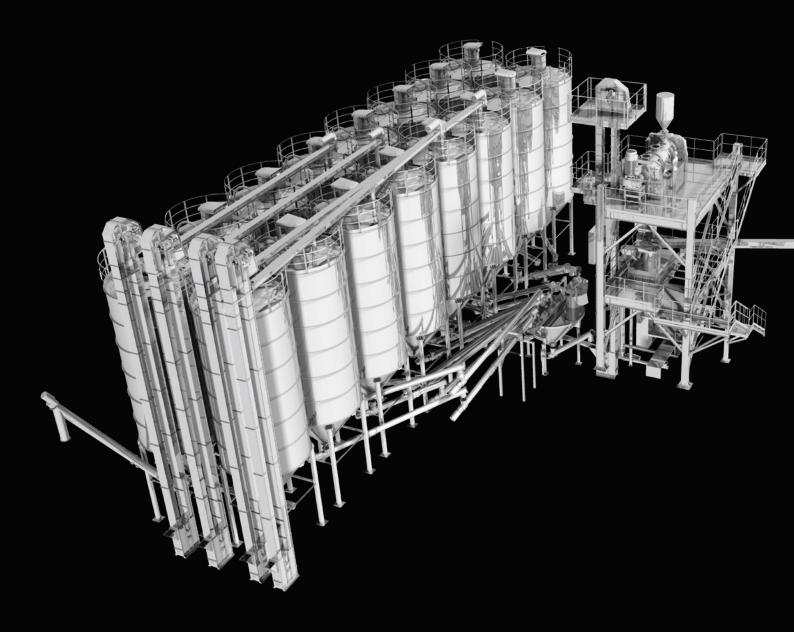

TESTING AND CONTROL

07

Once installation has been completed, we carry out the so-called blank testing. (without using raw materials) to verify the correct performing of the system before its functional testing.

PLANT START-UP 08

Once the system is successfully tested, we start the training phase of the plant workers, before definitively entrusting it to the customer to start production.

Industrial plants

Driven by passion for plant engineering and innovation, we offer customized solutions to meet specific needs.

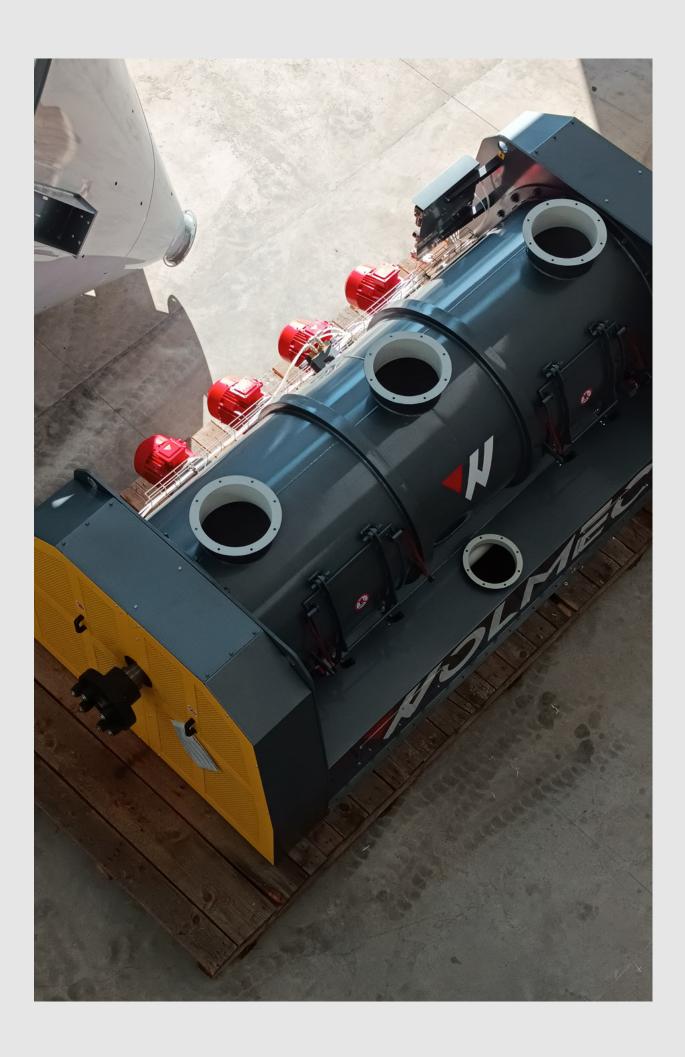

Our systems, thanks to their design and components performing the necessary processes, allow the transformation of raw materials or semi-finished products into finished products.

From dosing to transport, from mixing to transformation, every process is efficient and effective.

The chemical, construction, agri-food and waste treatment fields, to just name those that most need our solutions, normally require customized applications carefully chosen.

Each of our projects is planned in detail and aims to meet and exceed the customer's expectation.

Portfolio

Tecnology for simplifying world

Automation, information technology and artificial intelligence are the basic ingredients for maximizing efficiency, improving safety and optimizing production. For this reason we invest in technology every day.
